

Pro Circuit Works Showa A-Kit Suspension

**2021-2026 KX 250/450 &
2025-2026 CRF 250/450**

KEY FEATURES:

27mm Cartridge System • Dimplush Micro Surface Technology • Emerald Coatings • Kashima Shock Body
18mm Shock Shaft • Additional High & Low Speed Rebound Adjuster (Only KX)

Summary:

Pro Circuit's Work Showa A-kit Suspension is a blend of the top performance and technology that is in conjunction with our factory race team.

Forks:

Fitted with 27mm A-Kit cartridges in comparison to the 25mm cartridges that come stock on your OEM forks. The Dimplush micro surface texture reduces friction by improving lubrication throughout the inner surface of the fork tubes. Along with Showa's emerald coatings polished by special process to reduce friction that is superior in all elements. While still maintaining a factory look. Showa's new forged lugs will allow you to use the stock axle and wheel spacers making it convenient and a breeze for installation.

Shock:

The upper metal/kashima shock body gives the ultimate combo of lightness/performance. The Dimplush micro surface texture of the shock body will improve lubrication throughout the body. Combined with a 18mm A-Kit shock shaft giving strength and hold up for a more enjoyable ride. The stock shock only has a low rebound adjustment. This shock includes both a high and low adjuster! Giving endless tuning capabilities. (only KX version)
